CARE GUIDE TO *HIGHDEFLACE* ON YOUR HEAT-FRIENDLY STYLE

Beautifully Delicate. Carefully Maintained.

HighDefLace is crafted with finer materials that create an exceptionally soft and transparent finish. Due to the lace being more delicate, gentle handling and attentive care are essential.

Pssst... HighDefLace is much more delicate than welded lace!

CLEANSE AND CONDITION:

- Before washing, gently remove any tangles using your **Jon Renau Wide Tooth Comb** ONLY. Be sure to avoid pulling or tugging on the lace while detangling.
- Wet hair completely using cool running water.
- Gently lather hair with a small amount of **Jon Renau Fiber Love Shampoo**, making sure that the hair is traveling in the same direction. Use gentle massaging motions, DO NOT SCRUB.
- Support the lace with your hand when cleansing to prevent stress.
- Avoid stretching, pulling or tugging on the lace.
- Rinse thoroughly under cool running water until the water runs clear.
- Spray with **Jon Renau Fiber Love Conditioning Spray** (3-5 pumps) keeping away from base.

DRY AND STYLE:

Air Drying

1. **Choose the right stand**
   Place the wig on a **plastic or wire wig stand** that is smaller than the wig cap or collapsible to minimize tension.

2. **Protect the lace**
   Smooth the lace into place, keeping it flat and away from the stand's cross pieces. Do not stretch, pull, or hang the wig by the lace.

3. **Let it dry naturally**
   Allow the wig to air dry completely. Do NOT blow dry.

Once Completely Dry

4. **Move to a block head**
   Once completely dry, place the wig on a **canvas block head** for styling or shaping. Never place a wet wig on a block head, as this can stretch the lace while the cap is damp.

Styling

- Apply 3-5 pumps of **Jon Renau HD Smooth Detangler**, focusing on the bottom half of wig or hairpiece. Gently comb through using your wide tooth comb. Avoid pulling at the lace to prevent stretching.

  To prevent tangling of Heat-Friendly fibers, only use a wide tooth comb.

- Heat-Friendly fiber can withstand heat up to 350°F (176.7°C), however, Jon Renau recommends working at 270°-280° F (132°-138°C). When using a hot tool, ensure that you are gently styling around the lace to avoid stretching.

- Only use professional grade heat styling tools with digital temperature settings to control heat such as the **Jon Renau Infrared Duo Styler**.

STORAGE:

Maintain Cap Shape

Place the wig on a **wig stand** or **mannequin head** smaller than the cap to help maintain its shape and prevent stretching.

Choose a Cool, Dark Space

Store away from from direct sunlight and excessive heat to help protect the lace from drying or weakening.

Keep Away from Heat

Avoid storing near bathrooms, styling stations, windows, or other heat sources to help preserve the softness and integrity of the lace.

TIPS:

- Heat-Friendly synthetic fibers can tangle and frizz with wear. It is important that the frizz is corrected early to avoid permanent damage to the fiber. Use your flat iron to smooth any frizz before washing. Maintenance can help extend the longevity of both the fiber and base materials. Regular detangling is important for overall product longevity, as tangles left untreated may require repeated pulling, which can create tension and gradually stretch the base material and lace over time.
- We recommend using **HD Smooth Detangler** and a **wide tooth comb** DAILY to detangle. Be mindful when detangling around the hairline and delicate lace.
